

Letter of Recommendation- ProguardPlus Zytexx

Gforce is one of the 37 meter series Heesen Yachts which has a transom door that lowers to water level and acts both as a launch pad for the tenders and swim platform.

Due to the nature of the door's application, it is consistently being affected by the elements and more specifically pollution from the auxiliary engines. In the past, we have had to polish the water line and door after every cruise until this year, when we discovered ProguardPlus's Zytexx!

I am still amazed by the products "magical" properties after a full season! We do not even need to use soap and a simple wipe with brush or glove returns the surface to its original brilliant finish!

I thoroughly recommend this product which with its relatively simple application technique and effectiveness is definitely worth applying to all yachts with similar transom doors and more! We are now considering extending our use of the product to other parts of the yacht!

Please do not hesitate to contact me for any further confirmation of the product.
